AUTHOR INDEX 1976

Abbott, Jim.
- The fire safety chief. 37(1):3–5,9,13.

Bancroft, Larry.
- Fire management in Everglades National Park. 37(1):18–21.

Craig, William S.
- Heated cover keeps slip-on pumpers warm. 37(4):13.

Dieterich, John H.
- Jet stream influence on the Willow Fire. 37(2):6–8.

Donoghue, Linda R.
- Evaluation of fire-cause statistics a first step in preventing fires. 37(2):5,9.

Dukes, James A.
- Physical fitness—what can be done about it? 37(3):3,5–7.

Ewart, Jerry.
- Hot shot crews pay big dividends. 37(1):14–16.

Getter, James R.
- Wildfire hazard classification mapping for suburban land use planning. 37(3):4–5.

Gillian, Mary.
- Fire control makes use of lightning detection. 37(4):12.

Johnson, Von J.
- Drought and fire in the Lake States. 37(4):7–10.

Jukkala, Arthur H.
- Equipment development reporting. 37(3):10.

Kriesel, Jack, and Buddy M. Corbett.
- Smokey is alive and active on the Ozark National Forest. 37(1):8–9.

Main, William A., and Donald A. Haines.
- Man-caused vs. lightning-caused fires: a geographic and reporting problem. 37(4):5–6.

McLean, Hugh R., and Franklin R. Ward.
- Is "smoke-free" burning possible? 37(1):10–13.

Newcomb, R. L.
- National advanced fire prevention training. 37(3):11–12.

Newell, Marvin E.
- Working with the neighbors. 37(2):15–16.

Ozyigit, Ali, and Carl C. Wilson.
- Forestry and forest fire in Turkey. 37(2):17–20.

Phoenix, W. B.
- FOCUS: how can it be used by fire managers? 37(2):12–14.

Price, Thomas L., and Eugene F. McNamara.
- Fire prevention—its future. 37(2):3–4, 20.

Roberts, Charles F.
- The computation of fuel and fire danger parameters using a pocket calculator. 37(2):10–11,20.

Rondeau, Dick.
- Computerized fire studies. 37(4):3–4,11.

Schramel, John, and Teressa Videtto.
- Preplanned electronic dispatching: an efficient approach in large and multiple fire situations. 37(4):14–15.

Seger, Lorraine, and Clara Frobig.
- New map-working tool designed. 37(1):17,21.

Turpin, Bill.
- Fighting wildfire with agricultural pipeline. 37(1):6–7,9.

VanGelder, Randall J.
- A fire potential assessment model for brush and grass fuels. 37(3):14–16.

Withrow, Stanton R.
- Precipitation duration meter. 37(3):13,16.

Woodard, Paul M., Stewart G. Pickford, and Robert E. Martin.
- Predicting weights of Douglas-fir slash for material up to 3 inches in diameter. 37(3):8–9,12.

SUBJECT INDEX 1976

Aviation

Airlift! 37(4):2.
Working with the neighbors. 37(4):2

Cooperation

A new logo! 37(4):11
Fire prevention—its future. 37-(2):3–4, 20.
Smokey is alive and active on the Ozark National Forest. 37(1):8–9.
Working with the neighbors. 37(2):15–16.

Detection

Fire control makes use of lightning detection. 37(4):12.

Equipment

Ax and pulaski head remover and installer. 37(4):10.
Equipment development reporting. 37(3):10
Fighting wildfire with agricultural pipeline. 37(1):6–7, 9.
Fire control makes use of lightning detection. 37(4):12.
Heated cover keeps slip-on pumpers warm. 37(1):13.
Is "smoke-free" burning possible? 37(1):10–13.

Woodard, Paul M., Stewart G. Pickford, and Robert E. Martin.
- Predicting weights of Douglas-fir slash for material up to 3 inches in diameter. 37(3):8–9,12.

SUBJECT INDEX 1976

Aviation

Airlift! 37(4):2.
Working with the neighbors. 37(4):2

Cooperation

A new logo! 37(4):11
Fire prevention—its future. 37-(2):3–4, 20.
Smokey is alive and active on the Ozark National Forest. 37(1):8–9.
Working with the neighbors. 37(2):15–16.

Detection

Fire control makes use of lightning detection. 37(4):12.

Equipment

Ax and pulaski head remover and installer. 37(4):10.
Equipment development reporting. 37(3):10
Fighting wildfire with agricultural pipeline. 37(1):6–7, 9.
Fire control makes use of lightning detection. 37(4):12.
Heated cover keeps slip-on pumpers warm. 37(1):13.
Is "smoke-free" burning possible? 37(1):10–13.

New equipment. 37(3):2.
New map working tool designed. 37(1):17, 21.
Precipitation duration meter. 37(3):13, 16.
Preplanned electronic dispatching: an efficient approach in large and multiple fire situations. 37(4):14–15.
Tank-filler hose holder. 37(3):12.

Films and Publications

A new name. 37(2):8.
Author index: 1972–1975. 37(1): 21–23.
Do you have a young "fire bug" in your home? 37(4):11.
Equipment development reporting. 37(3):10.
Fire-weather observer's handbook reissued. 37(2):9.
Recent fire publications. 37(1):27; 37(2):14; 37(3):7, 16; 37(4):16.
Strategies for reducing incendiary fire occurrence in the south. 37(2):2.
Subject index: 1972–1975. 37-(1):23–27.

Fire Behavior

A fire potential assessment model for brush and grass fuels. 37(3):14–16.
Drought and fire in the Lake States. 37(4):7–10.
Jet stream influence on the Willow Fire. 37(2):6–8.

Fire History

Drought and fire in the Lake States. 37(4):7–10.
Fire management in Everglades National Park. 37(1):18–21.

Fuel Management

Is "smoke-free" burning possible? 37(1):10–13.
New map-working tool developed. 37(1):17, 21.
Predicting weights of Douglas-fir slash for material up to 3 inches in diameter. 37(3):8–9, 12.

General Fire Management

A new logo! 37(4):11.
Fire management in Everglades National Park. 37(1):18–21.
FOCUS: how can it be used by fire managers? 37(2):12–14.
Forestry and forest fires in Turkey. 37(2):17–20.
Wildfire hazard classification mapping for suburban land use planning. 37(3):4–5.

Presuppression

Ax and pulaski head remover and installer. 37(4): 10.
Fire-weather observer's handbook reissued. 37(2):9.
Hot shot crews pay big dividends. 37(1):14, 16.
Precipitation duration meter. 37(3):13–16.
Preplanned electronic dispatching: an efficient approach in large and multiple fire situations. 37(4):14–15.
The computation of fuel and fire danger parameters using a pocket calculator. 37(2):10–11, 12.
Wildfire hazard classification mapping for suburban land use planning. 37(3):4–5.
Working with the neighbors. 37(2):15–16.

Prevention

Computerized fire studies. 37(4):3–4, 11.
Do you have a young "fire bug" in your home? 37(4):11.
Evaluation of fire-cause statistics: a first step in preventing fires. 37(2):5, 9.
Fire prevention—its future. 37(2):3–4, 20.
Man-caused vs. lightning-caused fires: a geographic and reporting problem. 37(4):5–6.
National advanced fire prevention training. 37(3):11–12.
Smokey is alive and active on the Ozark National Forest 37(1):8–9.
Strategies for reducing incendiary fire occurrence in the south. 37(2):8.
Wildfire hazard classification mapping for suburban land use planning. 37(3):4-5.

Safety

Is "smoke-free" burning possible? 37(1):10–13.
Physical fitness—what can be done about it? 37(3):3, 5–7.
The fire safety chief. 37(1):3–5, 9.

Suppression

Fighting wildfire with agricultural pipeline. 37(1):6–7, 9.
Hot shot crews pay big dividends. 37(1):14–16.
The fire safety chief. 37(1):3–5, 9.

Systems

A fire potential assessment model for brush and grass fuels. 37(3):14–16.
Computerized fire studies. 37(4):3–4, 11.
FOCUS: how can it be used by fire managers? 37(2):12–14.
The computation of fuel and fire danger parameters using a pocket calculator. 37(2):10–11, 20.

Training

National advanced fire prevention training. 37(3):11–12.
